What **drives me?**

Individual motives. One common purpose.

The motivation to achieve the best possible for patients is personal to each and every one of us, but we share a common purpose:

To connect the next generation of patients to pioneering care.

What drives you, drives us

At Novartis, every groundbreaking innovation begins with patients at the heart. We are not just treating cancer. We are **transforming its future and restoring hope.**

Driven by **patient needs**, our therapies are **lifelines of hope.**

For decades, **molecule-first thinking** shaped cancer care. But as patient needs evolve, so must innovation.

At Novartis, we see **progress through the eyes of those we serves**, driven by insight, backed by a robust pipeline, and committed to **access**. We're shaping a new era where science meets humanity and survival meets hope.

Redefining cancer care - reimagined through you.
